A2 (H1) Do checkpoints with lower in-distribution error degrade more on unseen grids?
Spearman ρ = -0.53 [95 % CI -0.71, -0.28]
n = 53 checkpoints, permutation p < 0.001
mean zero-shot relative active residual (dimensionless)
in-distribution relative active residual (dimensionless)
Spearman ρ = -0.94 [95 % CI -0.97, -0.88]
n = 53 checkpoints, permutation p = 0.008
degradation ratio zero-shot / in-distribution (dimensionless)
in-distribution relative active residual (dimensionless)
